BULBOUS AND TUBEROUS-ROOTED PLANTS,

OFFERED BY

WILLIAM BULL, F.L.S.

EARLY ORDERS ARE RESPECTFULLY SOLICITED TO ENSURE FINE BULBS.

For the convenience of purchasers who do not wish to choose their own sorts, Mr. W. BULL will have much pleasure in making suitable and liberal selections of the finest and most distinct free-blooming varieties.

HYACINTHS.

Those marked thus (†) are the best and most suitable for culture in Pots, Glasses, and for Exhibition.

Immediately after potting, which may be done from September to December, **place out of doors on a bed of ashes**, and cover the pots with six inches of the same material, or cocoa fibre is preferable; there let the pots remain till full of roots, which will usually be about six or eight weeks. If very early flowers are required, pot in September, and when sufficiently rooted, force gently, and give abundance of water; but if large finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth must not be forced, but when removed indoors, should be placed on the shelf of a greenhouse, or in a cold frame, close to the glass, always in the most genial and sunniest situation at command, and the plants allowed to develope their flowers gradually and naturally, giving water regularly and freely; as it is well known to cultivators that failures, for the most part, arise from allowing the soil to become dry, when the rootlets are in consequence injured. Abundance of air is necessary, but a dry atmosphere and a draughty situation should be sedulously avoided.

If the Hyacinth is cultivated in glasses, the base of the bulb should just touch the water, and a little charcoal should be placed in the glass to keep the water sweet. The glasses, if possible, should be kept in a room without a fire, or better still in a greenhouse, and always in the sunniest and lightest situation at command till the flower spike is developed.

CYCLAMEN PERSICUM.

Too much can scarcely be said in favour of the superb varieties of this plant, of which the old *C. persicum* is the type, whether they are regarded as objects for the ornamentation of the greenhouse or conservatory, or for table decoration, for which their compact floriferous character eminently fits them. The flowers are also extremely useful for bouquets, and when plucked, if kept in water, they will last in freshness and beauty some weeks.

FREESIAS.

The chaste and fragrant flowers of these beautiful Cape bulbs render them of the greatest value for decorative purposes, especially where cut flowers are required during the winter months; they grow about 9 inches high, producing 6 to 8 flowers, the fragrance of which is most delightful. They can be easily forced, and should be planted 6 to 12 bulbs in a pot.

GLADIOLUS.

(HYBRIDS OF GANDAVENSIS.)

There are few flowers more showy and beautiful than the Gladiolus, and the varieties of the *Gandavensis* section are perfectly hardy and easily grown, whilst their erect and stately growth, and long spikes of flowers, developing themselves successively, never fail to win admirers.

To facilitate the cultivation of this highly decorative plant, a few remarks may be necessary to some :—

The best and safest time for planting is from the beginning of April to the end of May, when a continuous bloom may be assured from July to September.

Soil is not much a point for consideration, so long as it is not stiff and consolidated; but it is important that it should be deeply dug previous to planting.

Large bulbs should be planted from 3 to 4 inches, and smaller bulbs 2 inches deep.

During excessively dry weather, copious waterings are recommended.

When any bulbs show signs of growth before the time mentioned above, they should be potted and kept in a cool frame until the proper season for planting out.

CHOICE GLADIOLUS.

This beautiful tribe of plants should be largely planted everywhere, because—

They are perfectly hardy and easily grown.
They are gorgeously beautiful.
Their handsome spikes of flowers last a long time when cut and placed in water.
Planted by hundreds among Rhododendrons, they brighten and enliven the beds during the summer and autumn months.

Orders are booked throughout the year at the following prices, and the bulbs supplied in January, February or March.

IRIS.

ENGLISH (I. anglica or Xiphioides).

For brilliancy of colour and fine vigorous foliage the English Iris takes rank amongst the handsomest of flowering bulbs. They greatly resemble the Spanish Iris in style of growth, attaining a height of about 2 feet, and produce, during June and July, a succession of large and beautiful flowers.

SPIRÆAS.

SPIRÆA ASTILBOIDES.

One of the most handsome of hardy herbaceous perennials, certificated both by the Royal Horticultural and Royal Botanic Societies. The inflorescence consists of compound feathery branches of elegant white flowers. It will be a charming and indispensable plant for pot culture, its beautiful flowers being produced in the greatest profusion. 5*s.* each.

SPIRÆA (HOTEIA) JAPONICA.

Cannot be too highly appreciated as a decorative plant for early forcing, its pretty erect shining green foliage, surmounted by numerous beautiful and graceful panicles of white inflorescence, giving the whole plant an elegant appearance, and rendering it at once most pleasing and useful for decorative purposes.

Strong imported clumps, 5s. per dozen.

SPIRÆA PALMATA.

The bright pink Spiræa, one of the most beautiful hardy plants in cultivation, producing lovely broad corymbs of pink flowers. It is a native of Japan. 6*s.* and 9*s.* per dozen.

AMARYLLIS.

This deservedly popular family cannot be too highly recommended. The ease with which they are cultivated and the gorgeously beautiful flowers they produce at almost any season, make them most desirable in any collection. By gradually drying the bulbs they can be put to rest at any time during the year, and then when required, if started in a gentle heat they quickly develope their large Lily-like blossoms, which are of various colours, generally embracing crimson, white and red, scarlet, rose-flaked, striped white and crimson, with various shades of colours.

GESNERAS (NÆGELIAS).

The value of Gesneras as decorative plants can scarcely be over-estimated. Most of them have rich velvet-like foliage, which, in the respective kinds, varies from green to crimson. If only grown for the foliage they are very attractive, but they produce splendid pyramidal spikes of blossom, which are extremely handsome. Originally the principal colour was orange-scarlet; now, as the result of fertilisation, there are various colours and shades, added to which the spotting on the flowers of some of the varieties is extremely pretty.

Selections of good varieties at 18s. and 30s. per dozen, according to sorts.

NEW HYBRID GESNERAS.

PYRAMIDAL, a vigorous growing variety, freely developing numerous lateral branches, which become covered with rose coloured flowers, shaded with purple; the throat is golden-yellow with small crimson spots. 3*s*. 6*d*.

SOUVENIR DE MADAME JOIGNOT, this variety has handsome bronze-green leaves, the Achimene-like flowers, which are abundantly produced, being of a rich carmine-purple colour. 3*s*. 6*d*.

PANCRATIUM GUIANENSIS.

A very distinct species introduced from British Guiana, producing its elegant flowers in handsome clusters on erect scapes. The blossoms are pure white, the narrow segments being drooping and most prettily curled and twisted, presenting an aspect of the most charming description. The corona is trumpet-shaped, the filaments which proceed from it being bright green, and furnished with bright yellow anthers. 10*s*. 6*d*.

EUCHARIS MASTERSII.

This new and beautiful Eucharis has been imported from the United States of Colombia. Its deliciously fragrant flowers are of the most snowy whiteness, the free portion of the staminal cup or corona, forming a narrow but united collar-like rim to the perianth tube. This species will be found a desirable acquisition, it being very free flowering and the bloom admirably adapted for cutting. It has been awarded a First Class Certificate by the Floral Committee of the Royal Horticultural Society. 2*s*. 6*d*. each; 24*s*. per dozen.

EUCHARIS AMAZONICA, 1*s*. 6*d*. and 2*s*. 6*d*.; 15*s*. and 24*s*. per dozen.

EUCHARIS CANDIDA, 1*s*. 6*d*. and 2*s*. 6*d*.; 15*s*. and 24*s*. per dozen.

NEW AND CHOICE GLOXINIAS.

WITH ERECT FLOWERS.

MELAS, mouth of throat purplish crimson, lobes rich violet, base of throat spotted crimson. *5s.*
PHASIS, a fine flower with white throat rayed into the lobes, the rays surrounded with purple, lobes crimson shading off to rose. *5s.*
TAMPICO, lobes fiery crimson shading to rose, throat spotted with crimson. *5s.*
TERANO, lobes deep rose shaded with violet, throat spotted with violet and crimson. *5s.*

GLOXINIA.

Choice selections made by Mr. W. B. at 18s. and 30s. per dozen, according to sorts.

Good blooming tubers, unnamed, of various colours, raised from handsome varieties, 6s., 9s. and 12s. per dozen; 35s., 50s. and 70s. per 100.

GLOXINIA INSIGNIS, bluish lilac, marked with a large crimson blotch at the base. *2s. 6d.*
MACULATA SCEPTRUM, a magnificent hybrid, producing clear lilac, well-formed blooms. *1s. 6d.*

TYDÆAS.

These can be cultivated so as to produce an abundance of bloom throughout the winter, their flowering season principally depending on the time of year their tubers are started into growth. With a little management a succession of blooming plants can be had nearly throughout the year. *18s.*, *24s.*, *30s.* and *42s.* per dozen, according to sorts.

DOUBLE TUBEROSES.

(POLIANTHES TUBEROSA.)

The perfectly double flowers of *Polianthes* are well known for their delicious fragrance and pearly whiteness, being admirably adapted for Button-holes, Bouquets, &c.; indeed, are of the greatest value wherever cut flowers are required. By successional plantings these lovely flowers may be had all through the summer and autumn. They should be potted in rich loamy soil and started in a good bottom heat, being afterwards grown on in a stove, with plenty of moisture.

AFRICAN.

These can be supplied in fine bulbs in October and November.

2*s.* 6*d.* and 3*s.* 6*d.* per dozen; 12*s.*, 15*s.* and 20*s.* per 100.

DOUBLE AMERICAN.

Fine selected bulbs, 3*s.* and 4*s.* per dozen; 20*s.* and 25*s.* per 100.

DOUBLE AMERICAN.

"THE PEARL."

Fine selected bulbs, 3*s.* and 4*s.* per dozen; 20*s.* and 25*s.* per 100.

The above can be supplied about the end of December.
